Data protection and security

CLUP.life is designed for the GDPR: data protection is not an option but the foundation of the architecture.

Encrypted storage

Personal data is stored encrypted at application level in the database (envelope encryption with AES-256-GCM). Passwords are stored only as a one-way Argon2id hash.

Hosting in Germany

The servers are located in Germany (Hetzner, Falkenstein). Backups are encrypted.

No tracking, no ads

No third-party advertising in the network and no behavioural tracking. Maps come from our own map data, not from third-party providers.

You decide who sees what

Visibility per detail on one common scale. The person decides about details concerning themselves; people search only with consent, children never.

Children specially protected

Child accounts with parental controls; read-along in chats only for ages 10–12, never secret and visible to everyone involved.

Access, export, deletion

View and download all your data and delete your account at any time. Retention and deletion periods are documented.

Traceable

An audit log records who changed what and when; it is append-only and cannot be silently rewritten.

Secure sign-in

Two-factor sign-in, adjustable session length, rotating sessions with session-theft detection; uploaded images are stripped of location data (EXIF).

This page describes the technical design; it replaces neither the privacy policy nor legal advice. The legal texts on clup.life in their German version prevail.

Pricing and plans

Free is fully featured. Premium is available for individuals, clubs, and federations and municipalities. Binding prices are on clup.life/preise.
